[Problem](#)[Submissions](#)[Leaderboard](#)[Editorial](#)

In this challenge, you must read an integer, a double, and a String from stdin, then print the values according to the instructions in the Output Format section below. To make the problem a little easier, a portion of the code is provided for you in the editor.

Note: We recommend completing [Java Stdin and Stdout I](#) before attempting this challenge.

Input Format

There are three lines of input:

1. The first line contains an integer.
2. The second line contains a double.
3. The third line contains a String.

Output Format

There are three lines of output:

1. On the first line, print `String`: followed by the unaltered String read from stdin.
2. On the second line, print `Double`: followed by the unaltered double read from stdin.
3. On the third line, print `Int`: followed by the unaltered integer read from stdin.

To make the problem easier, a portion of the code is already provided in the editor.

Note: If you use the `nextLine()` method immediately following the `nextInt()` method, recall that `nextInt()` reads integer tokens; because of this, the last newline character for that line of integer input is still queued in the input buffer and the next `nextLine()` will be reading the remainder of the integer line (which is empty).

Sample Input

```
42
3.1415
Welcome to HackerRank's Java tutorials!
```

Sample Output

```
String: Welcome to HackerRank's Java tutorials!
Double: 3.1415
Int: 42
```

Change Theme

Language

Java 7

```
1  import java.util.Scanner;
2  import java.io.*;
3  public class Solution {
4
5      public static void main(String[] args) throws IOException {
6          Scanner scan =new Scanner(System.in);
7
8          int i = scan.nextInt();
9          double d =scan.nextDouble();
10         scan.nextLine();
11         String s =scan.nextLine();
12         System.out.println("String: " + s);
13         System.out.println("Double: " + d);
14         System.out.println("Int: " + i);
15     }
16 }
17
```
